

### ABSTRACT OF THE DISCLOSURE

A kiosk for capturing an image. The kiosk includes a housing having a width and a continuous curved surface; a digital image capture device adapted to capture an image, the image capture device disposed in a portal in the curved surface; a display disposed on the curved surface adapted to display the image captured by the image capture device; a light source disposed within the housing for illumination during the capture of an image by the image capture device, the image capture device being disposed intermediate the display and light source, the light source being configured along the width of the housing; and a data entry device adjacent the curved surface such that the distance from the digital image capture device to an outboard edge of the keyboard defines a minimum image capture distance.
